Amber *– review controls*
Green *- proceed*

IMPORTANT: **Ensure any additional hazards and control measures are recorded prior to commencing the task**

STAGE 1

Description of task or Activity (Title) List any additional safety information required for the task.

This is a general workplace risk assessment for Foster & Freeman at Evesham. It will also be provided to any sub-contractors who carry out maintenance or project work activities on the premises.

It is not intended that this document covers or substitutes task-specific risk assessments, which should still be completed by staff and contractors, along with the appropriate method statements.

It is split into 2 parts; Part 1 covers General Hazards, and Part 2 seeks to map known hazards to particular areas of the premises which are subject to special access control for safety reasons.

1	Unfamiliarity with the site and/or uncertainty about the job	Contractors Visitors	Contractors may suffer injuries or ill health if they are unfamiliar with the hazards on site, such as machinery or the presence of asbestos, or if they are uncertain about the best way to do a job.	Most of the contractors used are repeat visitors to site (much of the work contracted out is repeat tasks on air-conditioning systems etc) and they are familiar with layout, significant risks of the job, how to control those risks. Maintenance staff always work closely with the F&F SHEQ Manager to: (a) decide the best time for contractors to be on site; and (b) Allow time for client staff to know that contractors will be on site and what job they will be doing. One-off / reactive jobs are discussed with client technical staff. Key issues such as safe systems of work (e.g. isolation procedures, control of flammables etc), the provision of any necessary kit (e.g. access equipment), and any PPE, agreed before work begins. Contractors comply with induction and permit to work procedures, so F&F SHEQ Manager or delegate and staff know who is on site and where they are. Contracting companies' awareness and attitude to health and safety issues is assessed during the	3	3	9	The SHEQ Manager or delegate is to speak to all regular contractors to make them aware of this risk assessment and to check their awareness of health and safety issues on site, also to check that they cascade health and safety information to staff who haven't visited the site before. Contractors PPE and equipment will be checked prior to setting to work by a site representative.	2	3	6

				selection of new contractors centrally by F&F Procurement Department prior to engagement. All new contractors are inducted and briefed on health and safety arrangements on the site prior to set to work.							
2	Slips and trips	Staff Contractors Visitors	Maintainers and contractors may suffer injuries if they slip on spillages or trip over objects and fall.	Generally good housekeeping (eg procedures for spillages in place and adhered to). Floors generally in good condition, good lighting throughout, including stairs area. Designated walkways. In production and stores areas	2	3	6	No further action needed.			
3	Working at height (eg accessing ceiling-mounted air handling units on steps)	Staff Contractors	Contractors may suffer severe injuries if they fall from any height, e.g. during air conditioning / air-handling unit maintenance and repair.	All contractor jobs involving work at height discussed by maintainer, F&F SHEQ Manager and other relevant staff and an appropriate safe system of work and Contractor RAMS agreed before job begins. Ladders kept in F&F stores area, inspected by users periodically, also, before use and stored safely after use. Maintainers trained to use ladders safely and toolbox talks carried out.	2	3	6	SHEQ Manager or delegate to obtain evidence of FM contractor ladder training and receipt of toolbox talks etc.	1	3	3

					L	S	RF		L	S	RRF
4	Manual handling	Staff Contractors	Maintainer & contractors may suffer back pain or pain elsewhere from handling heavy and/or bulky objects.	Manual handling aids – trolleys, rack trolley, etc – available. F&F staff trained in safe manual handling. Contractors told to ensure their staff follow safe manual handling techniques. For jobs involving difficult manual handling, eg some packaging requirements, SHEQ Manager, contractor and relevant others discuss beforehand and use a safe system of work.	2	4	8	SHEQ Manager or delegate to obtain evidence of maintainers/contractors manual handling training and receipt of toolbox talks etc.	1	4	4
5	Noise	Staff Contractors Visitors	Maintainers & contractors may suffer discomfort and potential hearing damage if working in noisy areas or using noisy equipment.	Staff entering noisy areas in the Workshop e.g. machine lathes, drills are to be offered ear defenders. Contractors instructed to wear suitable hearing protection when the job exposes them to loud noise. Maintenance tools selected and maintained to ensure they run as quietly as is possible. (Noise survey undertaken by Head of Quality and specialist noise assessor – refer report)	2	3	6	Noise survey has been undertaken by Head of Quality dated 14th March 2025	2	3	6
6	Electricity	Staff Contractors	Maintainers may suffer shock and burns injuries from faulty electrical equipment or installation.	Maintainer's processes checked before each job begins to ensure that relevant machinery, circuits etc are isolated and locked off throughout the job. Contractors told that only electrical appliances which have current test certificates may brought onto site and	1	4	4	No further action needed.

				used. Pre-check to cover condition of cables, switches etc. On site fixed electrical infrastructure and all equipment is inspected to a planned schedule.							
7	Asbestos	Staff Contractors Visitors	Inhalation of asbestos dust and fibres and risk of Mesothelioma, Asbestosis and lung cancer	Asbestos survey undertaken. F&F staff are prohibited from working on or near any part of the building that contains asbestos. Contractors are made aware of the presence of asbestos when working nearby.	1	5	5	4 ACM's on site – Survey Report Number J000540 dated 17th Oct 2019 refers. 1 Cat D – no attention required, 3 class E – Inspect prior to disturbance. Asbestos will only be removed by competent licenced asbestos contractors.	1	5	5
8	Legionella bacteria growing in the hot and cold water systems	Staff Contractors Visitors	Staff, contractors who use common hot and cold-water supply.	F&F has undertaken risk assessment and drawn up a Water Scheme of Control, including: (regular sampling and disinfection / boiler (calorifier) etc operated and maintained to manufacturer's specification / thermostats checked to maintain temperatures – hot water stored above 60 °C and system designed to provide a return temp of 50 °C or above to the calorifier / cold water kept below 20 °C / infrequently used outlets run for 10 minutes every week to prevent stagnation. Site Water and Legionella check folder held, showing Policy, Governance and control measures identified.	1	4	4	Legionella Risk Assessment (Ref LMSLRAF&F-02022023) conducted 02/02/2023, stored in QMS Folder 33 - Legionella

					L	S	RF		L	S	RRF
9	Hazardous substances	Staff Contractors Visitors	F&F Staff, contractors, client staff and visitors risk skin problems such as dermatitis, and eye damage, from contact with cleaning chemicals, paint, or other substances used for maintenance / lubrication of plant. Vapour may cause breathing problems.	F&F staff and maintenance contractor trained in the risks, use and storage of COSHH substances, and wear personal PPE as defined in COSHH risk assessments and task specific risk assessments.	2	3	6	No further action needed.			
10	DSE	Staff	F&F staff	**FF092A DSE refers.** Control measures defined in DSE risk assessment (Workstation & Individual)	1	3	3	No further action needed.			
11	Fire (General)	Staff Contractors Visitors	Staff trapped could suffer fatal injury from smoke inhalation/burns.	The Fire Officer has conducted a Fire Risk Assessment for the premises and taken the necessary action (Fire drills / detection system / alarm test Fire doors / Emergency lighting / Exits marked and usable etc). Staff and contractors are made aware of the alarms and evacuation process at induction. Extinguishers are tested periodically. Awareness training is given to F&F staff.	1	5	5	No further action needed.			
12	Segregation of vehicles and pedestrians	Staff Contractors Visitors	Risk of being struck by a moving vehicle	Some walkways and pavements have been supplied to segregate pedestrians from vehicles. All persons are advised to use designated walkways and pavements where they exist. Hi visibility clothing worn by stores staff when receiving/despatching goods.	2	4	8	All drivers are to adhere to the speed limit. Adequate lighting fixed around car park perimeters.	1	4	4

					L	S	RF		L	S	RRF
13	Use of hand and power tools	Staff Contractors	Risk of injury	Only F&F staff may use tools provided by F&F. Staff may only use tools that they are competent to use. F&F will not lend tools to sub-contractors or visitors. This limits the risk of injury in the event of an accident. All tools are to be checked periodically to ensure they remain fit for use. Staff members are advised to carry out pre-use checks on their tools before use. Tools requiring calibration are registered in the calibration register and are calibrated as required. Power tools are generally battery driven. All mains fed tools and equipment undergoes PAT at intervals as required by BS 7671.	3	3	9	Use of specialist tools is subject to a task specific risk assessment.	1	3	3
14	Use of Company vehicles	Staff	Risk of injury due to road traffic collision	All members of staff with a requirement to drive a company vehicle have provided copies of their driving licence to prove they are suitably qualified to drive the provided vehicles. All vehicles are subject to regular checks to ensure they are safe to drive. All vehicles carry a first aid kit	3	3	9	ALARP			
15	Pressure systems	Staff Contractors Visitors	Failure of pressure system may lead to injury.	All pressure systems have been assessed by competent F&F staff, assisted by qualified insurance inspectors. Those systems that require a written scheme of examination (WSOE) in accordance with the Pressure Systems Safety	1	4	4	No further action needed.

				Regulations 2000 have been identified and a WSOE is in place. These items are periodically inspected in accordance with the WSOE and certificates of compliance are issued and held on record.							
16	Falling objects	Staff Contractors Visitors	F&F staff, sub-contractors, visitors. Risk of being struck by a falling object.	Wherever possible F&F staff control access to areas where there is a risk of being struck by a falling object due to overhead working, by erecting barriers and limiting access. Where this is not possible, F&F staff members working in the area are required to wear hard hats. Hard hats must be worn at all times when working at height.	2	4	6	No further action needed.			
17	Lone Working	Staff Contractors	Maintenance/Cleaning staff entering remote areas of site or working alone outside of standard working hours may become injured and unable to summon assistance	Where possible lone working is actively discouraged. Staff that are working in remote areas are to inform another member of staff of their location and expected time of completion. Staff working out of normal working hours are to contact their Line Manager and arrange a two way communication plan.	2	3	6	No further action needed.			
18	Lifting Operations	Staff Contractors Visitors	Risk of being struck by a falling object. Risk of injury from rig failure. Risk of damage to infrastructure	All lifting and slinging operations are controlled by competent persons. Generally, F&F will organise contract lifts for difficult or complex lifting work. All F&F lifting equipment is inspected in accordance with the recommendations of the ACOP to	2	4	8	ALARP

				LOLER. F&F will ensure that all lifting equipment employed by contract lift operators also comply with the ACOP for LOLER. F&F will limit the risk of injury to staff and visitors by erecting barriers and controlling access to areas where lifting and slinging work is being carried out. All operations will have associated risk assessments.							
19	Hot Works	Contractors	Risk of injury from fire. Risk of injury from contact burns. Risk of arc eye.	Conducting hot work on site is controlled by the requirement for the issue of a general hazardous work permit. Hot work carries the risk of fire, contact burns, arc eye or other eye related damage, grinding disc ejection, etc. Barriers are available to limit access to areas where hot works is being carried out. Portable fire extinguishers are available. All hot work applications are to be accompanied by a risk assessment.	3	3	9	Only suitably trained and competent personnel are to carry out these activities. Portable curtains are to be made available to limit likelihood of eye related injuries.	2	3	6
20	Bad weather conditions (snow and ice)	F&F staff Contractors Visitors	May suffer injuries if they slip on snow and/or ice or fall	Alerts sent to selected staff prior to the winter to remind them of the hazards presented to drivers during icy and snowy weather. The pavements surrounding the outside of the building are kept clear of snow and ice and roads and parking areas are kept clear by sub-contractors and/or F&F staff. In the event that weather has either deteriorated or is likely to deteriorate to such a level as to present intolerable risk to staff, then they are	2	3	6	No further action needed

Risk Assessment Form

No	STAGE 2 Hazard Identification	STAGE 3 Who is at risk?	STAGE 4 How may they be harmed?	STAGE 5 Current control measures	STAGE 6 Risk Rating (RF = LxS)			STAGE 7 Any further control measures necessary	STAGE 8 Residual Risk (RRF = LxS)		
					L	S	RF		L	S	RRF
26	Hazards associated with the PCB area	F&F Staff	Operatives may sustain cuts, impact injuries from type of equipment used and its location or by handling raw materials. Fumes and/or Flux Solder particles become airborne during manufacture.	The area is controlled and as such F&F staff should only visit for business reasons	2	4	8	NB: The PCB area is the subject of a separate Risk Assessment (RA077) which must be consulted prior to any operation	2	4	8
		Contractors Visitors	Fumes and/or Flux Solder particles become airborne during manufacture. Products & accessories on equipment, shelves or benches can move and fall causing, laceration and crush injuries if items are dropped.	The area is "controlled access" and as such non- PCB personnel are only allowed to pass through the area on the designated walkways within the stores area.	1	4	4	No further action needed	1	4	4
27	Hazards associated with the Chemistry Lab	F&F Staff	Operatives may sustain cuts, impact injuries from type of equipment stored and its location. Crush injuries from FLT	The area is "controlled access" and as such F&F staff are only allowed to in the area if they are trained and have been given access rights.	2	4	8	NB: The Chemistry Lab area is the subject of a separate Risk Assessment (RA075) which must be consulted prior to any operation.	2	4	8
		Contractors Visitors	Contractors and visitors may sustain cuts, impact injuries from type of equipment stored and its location Crush injuries from FLT	The area is "controlled access" and as such non- F&F personnel are only allowed to enter if deemed appropriate by the Head of Research.	1	4	4	No further action needed	1	4	4

Risk Rating Matrix

5	10	15	20	25	5
4	8	12	16	20	4
3	6	9	12	15	3
2	4	6	8	10	2
1	2	3	4	5	1
1	2	3	4	5	

Severity/Consequence (S)
1 = Minor injury/minor damage or loss
2 = First Aid Injury/Illness
3 = Reportable Injury/Illness
4 = Major injury, major damage or loss
5 = Fatality, catastrophic damage or loss

Likelihood (L)
1 = Very Unlikely
2 = Unlikely
3 = Possible
4 = Likely
5 = Very likely

Determine the risk and residual risk using this matrix -
Red *– do not proceed*
Amber *– review controls*
Green *- proceed*

IMPORTANT: **Ensure any additional hazards and control measures are recorded prior to commencing the task**
